The following is an **Examiner's Statement of Reasons for Allowance**: The following reference appears to be the closest art to the claimed invention. Bailon *et al.* (U. S. Patent 6,583,272) teach a conjugate comprising an erythropoietin (EPO) glycoprotein having at least one free amino group and having the in vivo biological activity of causing bone marrow cells to increase production of reticulocytes and red blood cells and a poly(ethylene glycol) (peg) group; and a pharmaceutical composition comprising the conjugate, a multiple charged inorganic anion such as sulfate, and a buffer such as phosphate, wherein the EPO glycoprotein can be human EPO having the sequence of SEQ ID NO:1 or 2, or a human EPO sequence modified by addition of 1 to 6 glycosylation sites or a rearrangement of at least one glycosylation site. However, the reference does not teach or suggest the pharmaceutical composition comprising methionine as an antioxidant. Therefore, the claims are allowable over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
